Unveiling the New Frontier in AI: Contextualized, Agentic, Impactful

While businesses are accelerating their Generative AI (Gen AI) adoption, recent research reveals that the tangible impact so far has been limited.

More than 75% of respondents use AI in at least one business function, yet only 1% of company executives describe their Gen AI rollouts as “mature.”¹

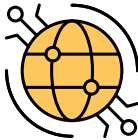

The gap presents a significant opportunity. Leaders who can swiftly mine Gen AI’s potential and adopt it with purpose stand to gain a decisive edge.

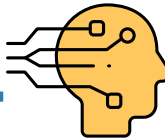

WNS-Vuram, with rich domain expertise and a strong Appian AI practice, enables enterprises like yours to capitalize on Gen AI with security, compliance and transparency. Our seasoned team leverages pre-built, proprietary AI/ML models and Agentic AI to create contextualized, customized solutions that address your specific challenges.

Enabling Enterprises to Maximize the Impact of Gen AI

- **Private AI:** Enhance security with Appian's Private AI
- **Copilot:** Elevate Agent productivity using knowledge sets
- **Process Transformation:** Enhance process performance with infused AI
- **Agentic AI:** Augment capacity and fast track automation using Human+AI Agent collaboration model

Vybestudio.AI

Infuse Your Transformation Projects with AI-driven Intelligence

Are your migration and development projects held back by budget overruns and missed deadlines? You are not alone.

A survey of global C-suite executives found that nearly **50%** had more than **30%** of their technology development projects over budget and late.²

It's time to change the narrative. With WNS-Vuram's VybeStudio.AI, you can:

Fast track your software development by

30-50%

Cut project costs by

20-30%

VybeStudio.AI simplifies and streamlines your projects, right from scoping to testing and governance. With enhanced collaboration and simulated workflows, our solution complements your existing systems, reducing manual effort and accelerating your project deliveries.

Our AI-powered Approach

- Deploy contextualised, homegrown AI agents, grounded in the organization's ecosystem
- Agents assist in providing draft output at each stage of the project
- Drafts are reviewed by SMEs and Business analysts
- Final outputs move to the next stage, to be refined by the next set of AI agents

Key Modules

Scoping Designer	Pre-discovery and Discovery Designer	Design Designer	Delivery Designer	Governance and Test Designer
Insights mined from the dashboard	Creation of a context-driven Business Requirements Document (BRD)	Decision between Appian case management and Appian low code	Appian composer	SOP/user manual creation
Conversion of images/graphs in documents to text	SIPOC generation	Conversion of the user story to a UI/UX mockup	Case management composer	Test scenario generation
SOP creation of the existing process	Epics and user story detailing with prioritization		Workflow generation	Synthetic data generation
Workflow generation of the current process	Integration with JIRA		Data model generation	Automation of test script with VATT
